

Duraline®

Rubber Molded Electrical Products

Single-Pole Power Connectors and Receptacles

Duraline Single-Pole and Multi-Gang Cam-Type Connectors are designed for quick, safe positive power connections. High conductivity with low resistance is assured through connections that lock tight, and stay tight, yet are quickly and easily connected and disconnected without tools. We have been supplying shipyards since and our connectors are the standard used by all naval facilities and shipyards both in the United States and abroad. Our connectors have been thoroughly tested and field proven to be the finest connectors available. When locked, our connectors are impervious to vibration and will not twist loose from cable flexing.
